NEW RUSSIAN AIRLINER:

Russia presents the biggest airliner in the world - seating 220 passengers - the T.U. 114. It's a double-decker job, with a service lift from the galley to the upper deck. One of the three saloons is a restaurant, and there are four sleeping cabins as well.

This flying hotel, it is claimed, can make a non-stop run from Moscow to Peking or New York in 10 or 12 hours. Russia may be dreaming of getting to the Moon first - but meanwhile, it seems she hasn't forgotten these little local journeys!
