If you were assessing it editorially, what would you say?

30.10.57

The Czechoslovak Week in News No. 43/57 - Satellite. This is one model of the Soviet Earth satellite. Its letting out into the universe arouse an immense echo in the entire world. In the height of almost 1.000 km unchained the satellite itself from the rocket and went on its way through the universe round the earth in a speed of nearly 30.000 km within one hour. It flies round the earth in about one and a half hour. Radio apparatus in the satellite sent regular signals. Observations in the whole world have readiness. In the Observatory on the Skalnatý Ples follows doctor Bochníček the satellite. He succeeded as the first in our country to take a snap of the satellite. In the Ondřejov observatory where they are specially occupied with the observation of the sun, they got new work. The night service receives signals from the universe are registered on magnetophone stripes. By measuring the intensity of the signals in the universe, they are able mathematically precisely to appoint the flying track of the satellite. Scientists on the observatory roof prepare the apparatus for observation and photographing. It is nearly five o'clock in the morning. Within a short time shall fly the satellite over us on its pilgrimage around the earth. The satellite is a great triumph for the Soviet science. The people's long dream to conquest the moon and the entire universe comes near to its realization.
