

AIR SCOOTER - The individual helicopter  
Positive developed : 15 meters - 50 ft

A sort of ~~light~~ of the sky, the ROTORCYCLE HILLER, one-man helicopter was presented to public during the week-end on the Issy-les-Moulineaux airfield, which is the Heliport of Paris.

This helicopter weighing 130 kilos can be drawn behind a car on a sort of braboard to the airfield, and is mounted in a few minutes without the help of any tools.

13,000 ft. The ROTORCYCLE which is built in the United States will be built also in France under an european license by the Company Helicotair. It goes up to 40,000 meters and uses 18 liters of fuel an hour with a range of 250 kilometers without refueling.

155 miles A perfect tool for many missions such as liaisons, road surveyance, forest supervising etc..
