POWER FROM THE SUN:

This is the biggest solar oven in the world - at Mont-Louis in the Pyrenees. Concentrated sunshine yields an impressive amount of heat - watched by experts from America, Japan, and Russia, and many other countries. They have come to Mont Louis for an international meeting of the fifty leading technicians in the solar energy field. Every schoolboy who has ever burned holes in his handkerchief with a magnifying glass knows what the sun can do - but on this level, the sun's rays can provide energy for many scientific and industrial purposes. It's still an expensive process - but it may soon help to solve the world's fuel problems.
