

PATHE JOURNAL

A DOME FALLS FROM HEAVEN

16 m = 50 ft.

Quite an unusual scene has been staged in the air above the French town Bayeux , to the great surprise of the lookers on.

A store of this town needing a new roof an helicopter got the charge of lowering it down on the building.

Unlike a huge may-bug drawing behind him a blue , yellow and red piece of paper, this helcopter drew behind him a big dome composed of polyester ( a plastic fabric) weighing 240 kilos and representing a surface of 10 square meters.

The operation which took only a few minutes has been met with full success.
