

SPACE MONKEYS MEET PRESS:

Space rockets at Cape Canaveral, scientific miracles though they are, have become an almost everyday affair. This one was different; in the nose cone were two monkeys, Able and Baker, and it was hoped to bring them back alive.

How the little creatures withstood the experience at the time, a Press Conference heard later on. But the Rhesus monkey has since died, in an operation to remove a recording instrument. So poor Able lost its life in the interests of space travel. The little squirrel monkey, Baker, also pioneered the way.
