

JET BOAT CAN GO ANYWHERE

✓
Minus propellor or rudder - a boat which takes advantage of the jet principle is a modern wonder for the pleasure craft fancier. Power and maneuverability tied to the thrust of water at the rear, the craft is capable of one hundred eighty degree turns at high speed - and can take water only three inches deep in its strike. Just watch the way it hits the turn.

...and that's not all,.... reeds, lily pads, swamp grass, and other obstacles are mere routine with no rudder or propellor to be bent or broken off. Whizzing across an island at Florida's Cypress Gardens... Finding a place to "drop anchor" is no problem..., and being that this is Florida, there's a reception committee to delight the mariner's eye. The jet age - it is wonderful!
