

2-F14901

BLACK ARROWS.

60/86

After four years of providing thrills for millions all over the world, the famous R.A.F. "Black Arrows" aerobatic team has given its last display. At Wattisham, Suffolk, Squadron Leader Peter Latham briefed his men for their final performance - in Spain. The Treble One Squadron's Hunters are soon to be replaced by the twice-as-fast English Electric Lightnings - not suitable for these aerobatic demonstrations. Now to put these blackboard plans into operation, and thrill the Barcelona crowds.

Destination below. Muntadas Airport, setting for the International Air Festival.

Now for a pilot's view of the "Black Arrows" in action.

No room for mistakes here.

Now a roll.

A loop in wine glass formation.

This is not the last we shall see of R.A.F. aerobatic teams. The job will be handed to another Hunter squadron to live up to the great reputation the Black Arrows have won for the Royal Air Force.
