

SCIENCE BEATS WRINKLES.

Osteopath Stanley Smith, of Folkstone, demonstrated on his attractive guineapig, Joan Gill, his scientific way of keeping age right in the background. He uses ultra-sonic waves, to break down those old cells just beneath the skin, they're the ones that give the game away as the years go by. When that's done, the face looks ten years younger. That's the end of another treatment, mostly to the other side of the face, where Joan said she's lost her wrinkles and all trace of puffiness.
