

NEW LIFEBOAT:

At Schevningen Pier a new lifeboat was demonstrated by its inventor. The inventor himself took his place in the self-made boat. He was pushed down from the Pier into the sea, 9 metres below. Prediction became truth. The lifeboat, 4 metres long, fell down and righted herself immediately. Thereafter, the boat was tilted to 180 degrees by an assistant and she righted herself again. This model lifeboat is claimed unsinkable.
