CAR PLANE MARVEL

Rolling out of an ordinary garage is America's contribution to traffic jam motorists. A combination automobile and aeroplane that can make 79 m.p.h. on the road. A three-wheel coupe without wings, powered with a regular six cylinder engine. When the driver wants to take to the sky he simply rolls into the nearest airport where he's parked his wings and has them attached in a matter of minutes. By a twist of the wrist the motor power is transferred from the wheels to the propeller and the winged car takes off to fly at a cruising speed of 120 mph. The inventor claims it's as easy to handle in the air as on the ground. As he looks down on a traffic block what he says is just Ha!
