## PLANE SAVED BY PARACHUTE.

The latest contribution to safe and happy landings. Jimmie Goodwin of Augusta, Maine, deliberately stalls his machine to demonstrate his invention, of Parachuting plane and Pilot to safety. The idea has been tried before, but this time it works.

Using a 52 feet triangular chute, he floats to earth, pland and all, as smoothly as you please.

Landing with a minimum of bump, Goodwin illustrates that a mere stunt today, may mark a new chapter in aviation tomorrow.
