

SPITFIRES IN THE MAKING

The constant drone of machinery in our aircraft factories is the music of victory. Over acres of floor space, men and women are turning the money from thousands of Spitfire funds into machines for the R.A.F. From Government Training Centres these girls have come to take their place at lathe, miller and drill. With the confidence of experts they set about the job of shaping the raw ~~material~~ metal from the foundry into components of over a thousand horse power demons of the air. From factories to assembly sheds where skilled mechanics and expert fitters and riggers begin to bring the planes to life. This is where your salvage, your saucepans and your shillings and pence have under the magic wand of industry become part and parcel of the finest fighting aircraft in the world. Every plane is a mechanical masterpiece capable of withstanding the severest treatment in the hands of the test pilots. From factory to flying field goes another to the boys who know how to use them.
