

DREADNOUGHT OF THE AIR.

Known as the P.B.2.Y.2, this ~~gx~~ huge 30-ton sky dreadnought of the American Navy takes to the water for test flights at San Diego, California. It's the big brother of the smaller CONSOLIDATED bombers, numbers of which are now in this country.

With a cruising range of 5000 miles the patrol-bomber can run rings round the Atlantic.

Destined for long-range duty at sea, we may yet hear of these giants doing convoy work, as American aid for Britain increases.
