TRAINING AIR PILOTS IN CANADA.

Down there is one of Canada's great training centres for the R.A.F. Less than a year ago just a plan- today a reality where each year thousands of men win their wings under ideal conditions.

Despite the speed with which they're trained, today's graduates have more flying hours than many aces logged during the whole of the last war. Canada is turning out Pilots, gunners, wireless men and observers in a never ending stream.

As each training aircraft becomes airborne, Canada places the Empire one step nearer its necessary mastery of the air. Anticipating a staff of tens of thousands of instructors, the Dominions training plan will be the greatest the world has ever known. Here is Britain's real backbone of strength.
