

RADIOLOCATION FOR A.T.S.

Here are some of the men and women who are working and training together in the scientific battle of Radiolocation versus the bomber. Girls of the A.T.S. and men of the anti-aircraft section of the Royal Artillery, are being schooled in the handling of some of the various instruments that go to the making up of aerial warfare's magic eye.

Dangers from enemy aircraft have been very largely solved by radiolocation. Yet big problems still remain for the anti aircraft gunners who, with the Auxiliary Territorial Service, have to know the intricate workings of Range finders and predictors.

But the product of the inventive genius of Mr. Watson Watt and his fellow scientists have revolutionised our defences, and these are the men and the women who are applying it with ever increasing success.
