AUSTRALIAN AIR SQUADRON RECEIVES VISITORS.

.....

Craftsmen engaged in the highly skilled work of constructing the famous Sperry Gyroscopic instruments for aircraft, are the guests of an Australian Squadron of Coastal Command. Before taking off on an invitation flight.. technicians and crew discuss construction details of the sensitive instruments which enable an aircraft to blind. As the giant Sunderland gets away, the mighty flying boat becomes an aerial laboratory in which highly skilled men give expression to the closer personal co-operation existing between workers in the aircraft industries, and our redoubtable airmen.

The ever expanding developments in modern science are making our aircraft superlative master pieces of engineering, and this is but one instance where men of science get together to applaud each others application of it. To round off the visit, the Sperry technicians present the Australian squadron with an oak panel in which are mounted two souvenir instruments. Here's wishing many happy landings to Coastal Command.
