BOULDER DAM TESTED

The Boulder Dam in Nevada, one of the greatest engineering projects the world has ever known, is all set for a real test under actual working conditions. Engineers lower the Arizona Gate into Lake Mead and into this large reservoir pours a hundred thousand gallons an hour. It's man's triumph over the menace of floods. Controlled irrigation for two million parched desert acres. Tunnels driven through the rocky walls of the canyon take the overflow. The mighty Boulder Dam has passed its test with flying colours.
