## R.A.F.'S NEW BOMBER... FIRST PICTURES

Hats off to the Avro-Manchester, Used with striking success in the latest and biggest R.A.F. Bombing offensive against Germany, it is the most luxuriously fitted of our new bombers. Heat from the engine is regulated throughout to provide a sort of central heating system. One of the most powerful aircraft in the world, the Manchester's defensive armament comprises eight machine guns mounted in three power operated turrets; two each in the nose and dorsal turrets and four in the tail.

Its bomb racks can accommodate the heaviest bombs yet in service. Coupled with the fact that the standard of crew comfort rivals that of a civilian air liner. is its steadiness in flight, efficiently sound-proofed interior, and complete absence of vibration.

Its nice to know that the lads are comfortable upstairs in "Manchester" while they're making things ~~uncomfortable~~ uncomfortable downstairs in Mannheim.
