

3-F-40000

PATHÉ GAZETTE 42 - 26. DUBLIN.

CURRENT ATTRACTION.

The world's largest circuit breaker for safe-guarding electric power has been installed at Pittsburgh and here's a demonstration of what happens when two million kilowatts are short circuited. Hold everything. The same power through the circuit breaker. A flick and a section of the power line is disconnected. In the refrigerator lab. engineers are testing equipment for Iceland. Experiments are made with ice covered installations, much easier to short circuit than ordinary ones, yes, electric fireworks at 20 below.
