CHURCHILL'S UNLIMITED.

Britain's new heavy infantry tanks - The Churchill's - make their debut in mass formation. The production figures of these heavyweights have enlisted a significant remark by our Minister of Production. "There is no limit to output" says Mr. Oliver Lyttleton.

There are various types of this formidable tank. Some are fitted with six pounder guns, while all are so strongly armoured that they can be used as pillboxes. In spite of their weight, they are able to move over any kind of ground at a great speed.

If these tanks make news now, what kind of headlines will they produce when they go into action, en masse.
