will prepared defences of the famous harbour at Rio de Janeiro. An anti-submarine boom from which will be suspended a heavy steel net, strong and deep enough to snare any underwater prowler. Booms are an effective means of sealing up the entrances to harbours.

Against enemy surface craft, there's additional protection. A Mineslayer takes aboard its deadly cargo.

The ship puts out to sea to deposit the mines according to a specified pattern. How to leave or enter the harbour now is a Brazilian Admiralty secret. Then comes a dress rehearsal for the reception of an Axis Sub. A welcome in the South American depth charge way.
