TITLE:- SUNNY DAYS.

Picture.: Kingston-on-Thames presents a very pleasing aspect on a really hot day. Literally hundreds of both sexes seek the benefit of the sun's rays with the prospect of a cooling dip afterwards and they thoroughly enjoy themselves, giving no thought to that prudish old dame Mrs. Grundy with her Victorian ideas.

They take the waters - not as their elders do, at the spas, but externally, with an abandon which is a joy to behold.

Can you picture a happier little crowd than this ? Down the slide they come, while laughter and happiness rule the day.

I think I'll run out to Kingston next week-end !

TITLE:- AIRSHIP ON RAILS.

Picture.: Here, for the first time, is seen a most remarkable new form of transport. It consists of cars suspended from a steel girder and driven by air-screws fore and aft.

This is the inventor, Mr. George Bemie, who is taking a party for a trip in his rail-plane. It is claimed that this vehicle will travel at one hundred and twenty miles per hour but of course this could not be attempted on a short experimental track.

It is said that the first big rail-plane line will connect Blackpool and Southport over the estuary of the Ribble.

TITLE:- WORLD'S RECORD FLIGHT.

Picture.: Think of that ! Over three weeks in the air at one stretch ! This feat was witnessed by great crowds from time to time and sister Irene prepared their food on terra firma. This was conveyed to the fliers by another plane and their fuel supply was also replenished in the same way no less than 180 times !

Kenneth Hunter attended to repairs in the air and in doing so took many risks. Gives one quite a shivery sensation doesn't it?

Here's another shot of the refuelling of the City of Chicago in progress and another one from the refuelling plane.

So - we leave them still in the air !
