TITLE.:- WONDERFUL ENGINEERING FEAT.

Picture.: The rush of the waters on the right of this picture made it impossible for a dam to be built in the ordinary way.

So some of the world's best engineers conceived the idea of building the dam on end --

--shaping its side to fit the river bed.

Then a dynamite charge was laid under this ten thousand ton structure --

--and exploded. Here's the result. The actual fall was so quick that you wouldn't have had time to realize what was happening -- so we filmed it in slow motion in order to give you an idea of what really occurred. Yes! that's ten thousand tons -- over twenty-two-million pounds -- of concrete re-inforced with steel cable, falling in one piece into the turbulent waters of the river -- to settle snugly against the bed of the river, damming the rushing water once and for all.

Now see the mighty fallen -- lying across the stream as though it had been built there instead of being literally thrown there.

TITLE.:- DIMINUTIVE DIANAS.

Picture. :- Fathers, mothers, sisters, brothers -- all are there to see the big race for little people.

It's a walking start --

-- and shortly after, two of the youngsters come nasty croppers at the first bend.

They handle their mounts with all the assurance of experts.

These three young ladies have left the others far behind --

--and a grim struggle ensues for the lead.

Miss W. Hilde's "Columbine" just manages to keep ahead of "Kitten" and wins by a neck only.

The young owner-rider gets her winner's rosette. I suppose she gets a prize in addition -- but I didn't see it.

These modern young misses did very well indeed -- and they're all under fourteen.
