

2). TITLE.:- ROBOT MILKMAIDS.

Picture. :- This might be referred to as "milking cows by numbers", for fifty are milked at --

--one time, by this remarkable new contraption. It is called a Rotolactor, and consists of a great --

--circular platform which revolves, somewhat like a roundabout. After the cows are installed, each in her separate stall, they are thoroughly washed and groomed.

The magnetic milking machine is then affixed to the animal; and everything is prepared for the twelve-and-a-half --

--minute ride round the circle, during which time the cows will have been relieved of their milk.

Here they go, slowly moving round at the rate of fifteen feet per minute. The general cleanliness gives the Rotolactor the appearance, --

--almost, of a hospital. See the milk rising in the bottles !

By the time each animal has made a complete circuit, she has given up her supply of milk.

The revolving platform brings her opposite the runway and she is automatically released -- until next milking time.
