

(3). TITLE.:- RAIL TRANSPORT FEAT.

Picture.:- When hundreds of tons of machinery have to be moved over the railway --

--the wheels of the rolling stock have to be well oiled to ensure smooth running.

This one truck is carrying a 65-ton stator, and altogether --

--twenty three waggon-loads make up the train. This is all British machinery, manufactured at Newcastle, and is on its way to Ymuiden, Holland. Proof that Britain is making some progress towards recapturing some of the world's markets. It is going all the way as a complete train: First to Harwich, thence by train ferry for Zeebrugge.

The machinery will not have to be handled at all until it reaches its destination, where it will be installed in the new power-station at Ymuiden. It's good to know it's British!
