

C-25451

(5). TITLE:- MOBILE MOORING MAST.

Picture:- The handling of the smaller types of airship is a ticklish business, --

--but this bright idea makes it much easier than it was. The ship is not fastened by the nose, as is the case with the bigger craft.

She is tied up to a hook set in a plate on her under-side. This avoids the --

--necessity of bringing her too close to the ground, and risking damage. Now she's all secure and ready to be put into her shed.

Here's how it's done! Quite a fine idea, but they'll have to look out --

--that she doesn't lift that car off the earth and take it for a ride, some day!
