

(9) TITLE:- TUG LIGHTER.

Picture:- It's quite a novelty for inland water transport.
She is driven by --

--means of a vertical propellor shaft, and will spin like
a top, for --

--the "spinner" at the wheel !

Here's the old style of barge towing, which will give
place --

--to this before very long. The new vessel has manoeuvring --

--capabilities hitherto unknown, in the world of inland
waterways.

We must hand it to these people; they are an inventive --

--nation. This new "Tug-Lighter" is just another little
bit of evidence of the fact.
