

(7).

TITLE.:- UP - AND DOWN.

Picture.:- This mound represents a quarter of a million tons of cement rock. It has --

--to be blown up - or down ! It was calculated that it wanted a pound of dynamite to shift four tons --

--of the rock. So fifty holes, each 107 --

--feet deep are filled with the explosive. When this is finished, --

--a match is applied ! And now we "hop it"-->

--to two miles off ! Here's how the big bang looked ! That's a quarter of a million tons taking a jump skywards ! Then it settles down to be transformed into a commercial commodity - cement. You might marvel that that crane is still standing, but it's nearly a mile away from the explosion ! Half-way between us and it !
