

BRJ2-C

(5). TITLE.:- AND IN ENGLAND. -

Picture.:- Over here, a test of launching gliders by motor-car is made. ... The car --

--speeds across the aerodrome towing the machine behind it over the somewhat bumpy ground. ... Presently the engineless plane --

--shoots up and away on its all-too-short trip.

Here's another 'shot'. Away goes car, --

--and here comes the little "bus" - piloted by the inventor, Mr. Lowe-

--Wylde. ... See how it taxis along on its balloon tyred wheels? Up she goes ! This time making a very good flight !.. Up and up into the blue ! That's something like a sailplane trip ! ... If you hadn't seen her launched you could believe it was a real aeroplane, with engine complete.

He climbed to 300 feet and made a complete circuit of the aerodrome. ... That's very good going !

Take-off
