

(3). TITLE.:- BABY OF THE AIR.

Picture.:- Mr. S.A. Thorn, the pilot, takes his baby out for an airing. ...

She's only a wee thing, and weighs less than 400 pounds !...
Joking --

--apart though, she's a handy little craft. She'll do 80 miles an hour, and does thirty to the gallon. ... You don't have to climb in, --

--you just "put it on" - like pants, as it were ! ...

Balloon tyres take the place of shock absorbers. ... She takes off in about 25 yards - in fact everything connected with her is small, except her performances. ... She has a cruising --

--range of 250 miles - pretty good for a midget ! ... Here she is, back from a little "flip" over the Surrey hills, --

--and her pilot proceeds to tuck her away in her little cot. ... There's one thing, although she's a "baby", she can't "scream the place down" if she's not comfortable.
