(6). TITLE:- HIGHER AND HIGHER.

Picture.:- Look up ! Really there's no other way you can look when you stand near this great tower of steel and cement which is to house more hustle and bustle than ever was under one roof before. It's only a few feet short of a --

--quarter of a mile high. Their job of piling it up is finished.

Before the Empire State building came into existence, we used to think that the limit of high buildings had been reached, --

--but the new one beats them all. It has no less than eighty-five floors and has even got a mooring-tower for airships at its summit ! When they do --

--moor an airship here - I think I'd prefer to be in the ship !
