

(8).

TITLE.:- HYDRAULIC MINING.

Picture.:- Powerful jets of water are flung against the hill side, with the object of undermining it, causing it to --

--flatten out and become useful for farming.

The terrific force of the water soon makes a big impression on the --

--earth's "hump" ! If one of those jets hit your --

--garden, it would give you the hump !

Hundreds of tons of soil are washed into the valleys below. It's --

--a good job we can't understand worn-language, for I'll wager --

--the air is blue with their objections to being disturbed in this way! I should have thought --

--dynamite would have performed this job more satisfactorily, but I suppose, it's --

--far better to know where the lumps are going to land !
