TITLE.:- GRAND PRIX.

Picture.:- Ten high-powered cars, representing Britain, Italy, Germany and Austria, leap off on the 300-miles race, the Irish Grand Prix. They have to do 70 laps of $4\frac{1}{2}$ miles each. Makes me --

--feel giddy to think of it ! At many points the speed --

--of the cars exceeded the hundred-miles an hour.

This would mean London-to-Brighton in half an hour, --

--that's if nothing got in the way, of course !

K If it did, it'd mean London to a much more distant place, in a very much shorter time !

After a few laps Sir Henry Birkin, in his Alfa-Romeo, gains a lead, and holds it --

--despite a heavy thunderstorm which would have upset a less experienced driver.

Here he comes - there he goes ! A three-minute win !

Sir Henry averaged 88.8. miles an hour. Too bad his car wasn't a Britisher too ! Still, --

--it was a fine race, with honours where they are best deserved !
