TITLE:- BIGGEST MONOPLANE.

Picture:- They get bigger and bigger. .... Germany's latest is this huge machine with its great expansive single wing, stretching ninety-feet each side of the --

--central cabin. .... It's her first flight prior to being put into general service, --

--between London and Berlin. .... She carries fourteen passengers, in addition to a crew of half-a-dozen --

--and has a complete kitchen for the supply of light refreshments while in the air.

She looks to be "all wing". .... In fact, it is the ultimate aim of her --

--designer to build a great wing with practically no body at all !!. ....

If they go on increasing the size of aeroplanes at this rate they'll need Zeppelin sheds to house them in !
