TITLE:- NEXT PLEASE.

Pictura.:- Everybody must realise the filthy state an engine is in after a day's work.

Here is a new device employed by an American railroad. The cleaning solution is sprayed out --

--of the twin pipes under a pressure of 100 lbs per square inch.

The largest engine only takes forty seconds to clean. This method not only saves time --

--but it executes its work much more thoroughly --

--than the old way.

Wonder if the drivers use this too ?
