

(3) 1/2.

TITLE:- SKYSCRAPER BLAZE.

Picture:- A spark from a rivetter's forge caused the trouble, and presented the firemen with a difficult problem. .... They just couldn't reach the --

--seat of the blaze. .... Everyone was afraid that the--

--heat would buckle the steel girders, and cause them to --

--crash to earth. .... That would have been an appalling catastrophe. ....

The bursting of two 50-gallon drums of oil --

--aggravated the fire, and "put the wind-up" the firemen. ...

The building is one of those steel-and-concrete affairs, which --

--when finished, will be fireproof ! .....

So we get a fine "object lesson". .... If a fireproof building catches fire -- call the fire brigade !
