TITLE.:- AMERICA'S BIG AIRSHIP.

Picture. :- A mighty airship is always a thrilling sight, but today the Los Angeles is

more thrilling than ever She is

going to keep an appointment with her mobile-mooring-mast,

which rears its heftiness from the deck of the

good ship Patoka Its an event of importance, for its

the first introduction of the "ship of the air" to the "ship of the sea".

The Los Angeles creeps towards the Patoka, and

everybody is agog with excitement Nearer and nearer she comes

while the mooring-crew stand by for their ticklish job.

Closer, and yet closer, her speed regulated to that of the water craft,

until she's near enough for the "hook up" to be attempted.

Its no easy job, but

at last it is accomplished without mishap You don't often have a chance of seeing a secret American naval gadget

at work at such close quarters. We consider ourselves lucky at being

privileged to show you this one.

When the big airship is securely "tied up", the crew come aboard the Patoka, and you

can't blame them if they wish each

other "Good health!" Oh! I forgot, they don't do that in America now!
