

(4). TITLE.:- SAFETY IN THE AIR.

Picture. :- Somebody is always at work trying to make flying as safe as - I beg --

--your pardon - safer than motoring on the roads ! ..... The "latest thing out" --

--is extending wings, calculated to eliminate most of the dangers of "taking off" and --

--landing. .... Ten feet can be added to each wing in this way. ....

The inventor takes the new-type 'plane for its first trip. .... That shows he has confidence in his own creation ! ..... The machine --

--behaves splendidly - even while the pilot extends the wings in flight.

She returns after an hour-and-a-half in the air, and makes a --

--perfect landing, aided by the telescopic wings. .... Everybody is satisfied, including --

--Monsieur Makonine, the inventor. .... I wish he could extend incomes as easily !
