

(2). TITLE:- BALLOON PLANE.

Picture:- It's a wierd-looking affair, but good looks don't mean much in a case--

--like this - (I'm not referring to the inventor, of course!)
Monsieur Oemichen--

--is out to demonstrate that his machine will rise and descend almost vertically, stop dead in the air--

--when required, and travel in reverse. XXXX The balloon gives direct lift to the helicopter, making it a lighter-than-air vessel, but without--

--the limitations of an ordinary airship. XXXX She should be useful for observation work with artillery. XXXX

The Helicostat is the only one of her kind, but I don't suppose it will be very long before you'll be able to get one - if you save up enough cigarette coupons!
