

(2). TITLE:- FULL STEAM AHEAD.

Picture:- The barometer of British industry appears to be at "set fair", so the big concerns are going ahead--

--with their bit of the revival. XXXXX The Lancashire Steel Corporation are spending over a million pounds in reconstruction, giving work to hoardes of willing workers. XXXXX The hottest part of the work here is by the blast furnaces,--

--where molten metal runs, almost continuously, into large ladles preparatory to being transferred to the Steel Plant for transformation into the best steel in the world ! -

XXXXX Hot stuff, this ! A good slogan for anyone near these vats is - KEEP OUT ! XXXXXX Mind you, the--

--people in these parts are very hospitable, but your welcome would be too warm if you "dropped" in here !

They have a novel way of charging the furnace with scrap, in addition to the hot metal from the blast furnaces. XXXXX Like many another "full hand" it comes away empty !! XXXX

This white hot ingot is a railway-like-to-be ! XXXXXX

Out it comes from between the last of the rollers - to be straightened--

--and cooled, prior to cutting up into the desired lengths. XXXX They're certainly getting on with the job,--

--but that's quite enough for one day !
