-A-

OH BLOW. - THE SNOW ! Powerful plough
clears mountain highways after winter's
first fall.

-Cascade Range.U.S.A.-

Picture.:- Old Man Winter paid a visit to Mount--
--Rainier, nearly 15,000 feet up--
--in the air, and left five feet of--
--snow. This gives America a chance to use a new twin
screw plough to cut roads in her national Park. It--
--is very ingenious; a revolving shaft--
--palls the snow into a giant bank, and--
--then it is thrown off--
--the highway. The shaft can be set at any angle according
to--
--where the snow is to--
--go. This road to Paradise Valley has--
--never before been open in winter. It is suitable for
winter sports, so the government is interested. Their
National Park may be another Coney Island yet !
