INTRODUCING "ELYTROPLAN" - French inventor presents
an entirely new idea for aircraft.

-Near Paris-

Picture:- We have had and have the giro-plane, the
helicopter, and a few others, and now Monsieur le--

--Viscount Charles de Rouge has gone--

--and invented the Elytroplane which means, I am told,
the aeroplane without a tail. It has a sort of mast
instead, with a fin at the top for stabilising. The
idea was obtained from the study of coleopterous insects -
Sounds like a new--

--word for a cross word puzzle. This elytroplane it is
claimed will land--

--vertically. The question is, Monsieur le Viscount,
will the darned thing fly?
