-2-

TO GLIDE THE CHANNEL ,? Inventor of novel
hydro-glider prepares his craft for Channel
attempt.

-Paris-

Picture:- This is an invention which is built to glide
over the channel on--

--the surface of the water. It hasn't done it yet, but--

--the inventor hopes it will, and is getting it in trim
for the journey. Its design--

--includes a sort of internal double screw paddle which
should drive it at--

--great speed. By the way that is the Alexander III
Bridge in the background. Inventor--

--Remy's trouble will be to make the channel behave while
he glides.
