RAILWAY CHARABANC - First demonstration in  
this country of pneumatic-tyred rail coach.

-Oxford-

Picture.

EFFECTS ONLY OVER FIRST SHOT.

An entirely new method of rail transportation.  
A rail-charabanc on rubber tyres !

EFFECTS OVER NEXT SHOT.

60 miles an hour, with no jolts, bangs, or  
discomfort !

Never before has a rubber tyred vehicle been  
over our rail system. The thirty passengers who were  
carried on this trial run, reported the absence of  
noise and vibration.

It's the railways' counter attack against  
growing road transport. These vehicles can be run  
much more cheaply--

--than heavy trains, which, on many journeys, carry--

--no more passengers than were on this trial. The only  
thing required to make the idea perfect is free tickets !
