

RAILWAY HUSTLE - *Strong* bridge across
 River Ouse at Selby completely overhauled
 in three days and nights.
 -Yorkshire-

Picture.:- During forty-one year's service this bridge
 over the Ouse--
 --at Selby has carried main-line traffic, so it's--
 --time for a safety overhaul at express speed.

RIVET SOUNDS UP AND DOWN.

Every joint and rivet gets the necessary attention,
 and much light is shed on dark places by acetylene
 welders. Until the work is finished all trains are
 diverted to other routes.

It's always business as usual with railways. After
 72 hours of hustle the job is completed,--

--and the bridge can again safely bear it's 200
 trains a day, carrying umpteen passengers. Good
 "Safety First" work !
