

PARCELS BY ROCKET POST ! Testing an
invention for shooting small postal
packages to their destination !

-Near Paris-

Picture.:- Great minds have been at work again and
evolved the idea--

--of sending parcels by rocket post. The first
packet was a parcel in cylindrical shape to fit
into the rocket receptacle - anything up to about
ten pounds. It's--

--then posted in the--

--rocket box, and a match put to the entire outfit.

That's all right, but is it clever enough to
know the--

--right house to fall at ! I shall wait for
further developments before sending eggs that
way !
