AUTO TRAIN - Italian railway experiments with
pneumatic-tyred motor-coach, between Rome and Ostia.

-Italy-

Picture.:- Everything points to rubber-tyred railway
trains in the future ! After England and--

--France, Italy tries out the idea. The claims in
favour of this development are greater--

--speed, less noise and vibration and lower running
costs. Watch how--

--smoothly it runs over the obstacle on the line.
That would have derailed an--

--ordinary steel wheel. The vehicle is petrol
driven by a car type--

--engine. The speed of 100 miles an--

--hour is easily attained without danger or
discomfort. Railway engines belching sooty--

--smoke over the countryside may soon be things
of the--

--past, and the sooner the better. Well !
We enter a tunnel ! Hold hands you lovers !
