

VATICAN RAILWAY - Giant locomotive running over  
new track is first railway engine ever to enter  
Vatican City.

-Italy-

---

Picture.:- For the first time in the history of the  
ancient--

--Vatican City, the smoke of a railway engine blurs--

--the impressive picture of St.Peter's; and the shrill  
blast--

--of an engine's whistle shatters its mystical peace.  
The windows of this railway carriage look--

--over views of the sacred city at closer quarters than--

--train passengers have ever before seen them. There--

--is no escape from the encroachments of modern progress.  
And--

--now this aloof little state whose influence pulsates  
throughout the--

--whole world succumbs to the inevitable. But the dome  
of St.Peter's still dominates !
