THEREBY HANGS A TAIL - The Berengaria's
giant rudder refitted after repairs.

-Southampton-

Picture:- The largest rudder ever ! Fifty-five tons of--
--it -- being swung in air by a 150 tons floating crane
towards--
--the mighty ship which is to wag this extraordinary tail.
The length of the--
--giant rudder is 41 feet, and the--
--fitting of it calls for the--
--highest engineering resources. The clearance between the
rudder and its housings is only--
--one sixteenth of an inch, so that--
--the fifty-five tons must be put just right. The safety of--
--the ship and its passengers hangs on this vital part,--
--and the vital part now hangs--
--on the ship. Some tail !
